SUMMARY

Software Engineer who builds and ships production systems end to end in TypeScript — Node.js/NestJS backends and React/Next.js frontends. Strong in REST API design, data modeling, JWT auth, role-based access control and SQL query optimization. Shipped a 20+ module SaaS platform serving 200+ live studios, a live marketplace with 1,000+ users and 4 open-source npm packages. Comfortable owning features from schema to UI to deployment on AWS/Linux.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, Java, C++

Backend: Node.js, NestJS, Express.js, REST API design, JWT/OAuth, RBAC, Webhooks, WebSockets, Sequelize ORM

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, responsive UI

Databases: MySQL, MongoDB — schema design, indexing, query optimization

Cloud & DevOps: AWS (EC2), Linux, Nginx, PM2, Git, GitHub Actions (CI/CD), Postman

Concepts: System design, performance & scalability, DSA, OOP, OS, computer networks

EXPERIENCE

Software Engineer — Epic Web Service, Mohali

June 2025 – Present

- Designed, owned and shipped a full Studio Management Platform end to end — 20+ feature modules serving 200+ live studios — in TypeScript (NestJS backend, Sequelize/MySQL data layer).
- Designed and maintained REST APIs, data models and schemas that other modules build on; enforced DTO validation and guard-level checks for correctness and security.
- Built a 4-tier role-based, tenant-scoped access control system (Super Admin, Owner, Manager, Crew) with JWT auth and NestJS guards, enforcing row-level permissions on every route.
- Optimized SQL queries and ORM associations, cutting response latency on high-traffic endpoints by ~60% under load.
- Integrated Razorpay payments with secure webhook handling, signature verification and transaction reconciliation.
- Built a cross-platform (iOS/Android) push-notification service with device-token management and last-active targeting.
- Deployed services on AWS EC2 (Linux, Nginx, PM2, SSL) and debugged live production issues by tracing logs and reproducing requests to fix root causes.

PROJECTS

Wenuru — Production Marketplace (wenuru.com) | NestJS, React/Next.js, TypeScript, SQL, AWS

[Live](#)

- Helped build and ship India's marketplace for booking production spaces (studios, sets, venues) end to end — backend services, data model and product UI — now live with 1,000+ active users across multiple cities.
- Worked across the stack on API design, verified listings, real-time availability, transparent pricing and instant booking flows.

My Daily Buddy — Personal Project | Node.js, NestJS, MySQL, REST APIs, WebSockets, AI

- All-in-one daily-life app (routines, reminders, habit & health tracking, Indian food calorie database) with real-time in-app chat and AI-powered suggestions.
- Built passwordless OTP auth (email OTP, access/refresh JWTs, dual-inbox email-change verification) designed around abuse cases, not just the happy path.

Open-Source npm Packages | TypeScript/JavaScript, GitHub Actions CI/CD

- Authored and published 4 zero-dependency npm packages (rupee-india, numindia, indian-pincode, gstin-utils) with CI/CD and semantic versioning — 1,000+ weekly downloads, MIT-licensed.

EDUCATION

B.Tech, Information Technology — Chandigarh Engineering College (CGC Landran) |

2021 – 2025

CGPA: 8.10/10

CERTIFICATIONS & ACHIEVEMENTS

- Namaste Node.js** — Backend Development (Akshay Saini) · **DSA in Java** — Apna College · **MERN Stack Training** · **AWS Data Analytics & Cloud Security Foundations**
- 1st Runner-Up**, Smart India Hackathon 2023 (idea presentation)
